1. Operating The FeelMaster

Plug the adapter cable into the power port as shown below.

Green LED indicator starts flashing and FeelMaster runs in 1 min.

2. Wi-Fi Setting

Connect **'feelmaster_mini'** in Wi–Fi setting of your mobile as shown below. (You can login with temporary password '12345678' And change the password after first login.)

3. Operating Application

Launch FeelMaster App, Select your access mode. There are two modes, 'Internal Access mode' and 'External Access mode'.

Internal Access mode

Internal Access mode allows to connect and control the device within a Wi-Fi zone only.

External Access Mode

External Access Mode allows to connect and control the device from everywhere you are as long as you`re connected to the internet. In order to use External Access Mode, User account must be created and registered in Cloud through Internal Access Mode.

internet 0	iMaster	
FeelMaster		
	Zigbee	
	DMX	

4. Internal Access Mode

Launch FeelMaster App, And select Internal Access Mode.

5. External Access Mode

Plug the Internet cable into the WAN port as shown below. And in order to use External Access Mode, User account must be created and registered in Cloud through Internal Access Mode.

5-1> Register account

In order to use External Access Mode, you must create user account in administrator mode. Select 'MENU' at the top left corner of the app screen. And tab the 'Mode Change' for the administrator mode. After changing the mode to Administrator, Select 'MENU' at the top left corner of the app screen. Tab 'Cloud Control'. And sign in to your FeelMaster account as shown below.

Delete User Account(
